PRINCETON TECHNOLOGIES GLOBAL, LLC INTRODUCES EXCITING NEW WIRELESS SUBWOOFER BRAND

Syzygy Acoustics poised to solve age-old placement and sound quality issues plaguing traditional
powered subwoofers

Princeton, NJ, May 25, 2016– Syzygy Acoustics announces line of high performance wireless subwoofers with smartphone control and full auto-eq / digital room correction \$399 - \$999 USD

I'm really excited to bring to market our marriage of traditional high fidelity powered subwoofers with tremendous audio performance and cutting edge 21st century technologies, delivering real world benefits! ~ Paul Egan, President PTG

Wireless Audio gains a serious contender in the high performance bass reproduction market with the introduction of Syzygy's new line up. All woofers feature app control (iOS and Android) for easy set up; notably full auto-equalization and DSP room correction ensure ruler flat response and seamless integration heedless of room size or placement. Plus, up to eight Syzygy subwoofers can be paired with a single transmitter, assuring countless system configurations and thunderous, apocalyptic low frequency splendor and exceptional musicality. All models are designed to operate in either front-firing or down-firing configurations.

Syzygy, by definition is the relationship of two forces or things. In astronomy it's the alignment of three celestial bodies or planets. For Syzygy Acoustics it's all about the harmony of advanced technology, high performance audio and a passion for great sound. On this premise alone, Syzygy Acoustics was founded by Egan and a team of like-minded audio luminaries with a mandate to design and market traditional high performance / high fidelity audio components, framed with contemporary 21st century media and operational technologies.

On the traditional audio side, a holistic approach was taken in particular for driver design. Developed from the ground up by Ian Paisley, the famous groundbreaking acoustics engineer best known for his pioneering work in the field of psychoacoustics at Canada's National Research Center and later on as the VP of Engineering for Audio Products International, Paisley was given a clean slate to develop a no-compromise design. The result is subwoofers that reach down deep, have pace and tonality consistent with designs many times their price and, in concert with best in class amplification and the aforementioned cutting edge room correction and wireless connectivity, there is little remaining doubt that Syzygy subwoofers will "play nicely" with limitless arrays of A/V systems in even the most challenging rooms.
